PROJECTED WORKS, &c.—Tenders have been called for, by advertisement, for the erection of a new church at Tipton, Staffordshire; school rooms, and a new post-office, at Nottingham; an infirmary at Watford; an engine-house, boiler-house, tower, and other works at Clifton, for the Bristol water-works, with two reservoirs for same; cells for Lambeth workhouse; also for the completion of an institution at Dalston; for drainage and other works in Whitechapel; and various sewers in Westminster; for the execution of 8½ miles of the Glasgow, Airdrie, and Monklands Junction Railway; and the construction of the several stations on the Rugby and Stamford line; for 1200 tons of permanent rails for the London, Brighton, and South Coast line; for a supply of glass illuminators and tubes for the Admiralty; 800 tons of Guernsey lumps and 80 fathoms of deal ends for St. Luke's, Chelsea; Honduras mahogany, pine, oak, larch and other timber and plank for the Admiralty, for two years, and 100 tons tough cake copper for same.

THE IRON TRADE.—The strike in Lanarkshire, recently noticed in THE BUILDER, had of late, according to the *Edinburgh Witness*, been every day becoming more important to the iron trade. On Thursday, week before last, the whole of the blast furnaces at Dundyvan were stopped for want of material.—It has been at length admitted by one of the iron trade oracles, in allusion to a previous rather tardy hint of acknowledgment that all had not been exactly as was represented at the late quarterly meetings [of which meetings, it will be recollected, we some time since shewed pretty cogent reasons for steering rather clear in future], that, "although the price of Shropshire pigs had been well supported, it would be useless [now, we suppose he means,] to conceal the fact that the *difficulty of obtaining former rates for Staffordshire* yet remains;" but that "*in the rial trade* we have not heard of any further display *of failing confidence*."

FOREIGN ARCHÆOLOGICAL CONGRESS.—The historical and archæological section of the "Congrès Scientifique de France" will be held at Tours, from the 1st of September until the 11th. The various questions proposed to be discussed, many of them architectural, are given by Dr. Bromet in the *Gentleman's Magazine* for the current month. Amongst them are the following:—"Of what date are the painted windows of Tours cathedral; what subjects do they represent; who were their respective artists, and in what places were they executed? What effect had the form of arch employed during the twelfth and thirteenth centuries on the origin and general adoption of the pointed style of architecture? What is the comparative lateral thrust of pointed and of semi-circular arches? What are the properties of flying buttresses? Are they of any other use than as resistance to lateral pressure? In the painted glass of the thirteenth century had the hieratic forms then employed any analogy with the rules of heraldry?" Meetings of the French Archæological Society will likewise take place at Angoulême, on September 15th, 16th, and 17th, and at Limoges on the 20th, 21st, 22nd, and 23rd, to all which English travellers are specially invited, on the contribution of ten francs, entitling them also to the "Compte-Rendu" of the session.

IVY ON BUILDINGS.—Sir: Your last number had some extracted remarks on ivy and its effect on buildings. It is there stated that ivy keeps off the rain, and is a protection to the wall on which it climbs. Perhaps this is true up to a certain period, but, besides the indirect injury arising from the concealment of decay, it destroys directly, in two ways—1. It will entwine itself in the coping, which, by contraction in the length of its stem, it will pull over. The walls surrounding a castle three miles west of Banbury are thus pulled over. 2. It will readily insinuate itself into a fissure, which it will widen, by horizontal expansion, to the overthrow of the masonry. In the north wall of the north transept of Calder Abbey, Cumberland, there is a stem of ivy 2 inches in diameter, now exposed to view, having thrust away the inside face for some 20 feet square. The gist of the argument in the extract from the *Gardeners' Chronicle* is, that because ivy is generally the concomitant of ruin, we must not therefore infer it is the cause. Nor must we; but at the same time we must not therefore infer that it is not the cause. WILCKNS.

THE NEW PARLIAMENT.—The railway, engineering, and building interest will fare very well in the new Parliament as compared with former Parliaments. Mr. Hudson again sits for Sunderland, and brings in a friend for York, to say nothing of his influence in assisting Mr. R. Stephenson, the engineer, to a seat for Whitby. Mr. Locke, the engineer of the "Grand Junction," is returned for Honiton; Mr. Peto, the builder and railway contractor, is in for Norwich; and Mr. Cubitt, for Andover; and Mr. Wyld, the mapseller in the Strand, has been returned for Bodmin. Mr. Chaplin, the chairman of the South-western Railway, is in for Salisbury; and though last, not least, Mr. Glyn, the chairman of the North-western, is member for Keodal. In this election "the battle of the gauges" has gone against the broad gauge and in favour of the narrow, for while Hudson, Glyn, Chaplin, Locke, and Stephenson, all narrow gauge men, are in, Mr. Russell, the chairman of the Great Western, has been defeated at Reading; and the engineer of that company, Mr. Brunel, who was talked of for Bristol, did not make his appearance.—*Morning Post.*

IMPORTATION OF ZINC.—Several very large importations of spelter or zinc have taken place within these few days, one vessel having brought 5,743 packages, another 10,232 plates, and others nearly 100 tons weight of this article, the production of Prussia. This zinc, or spelter, by both which names it is equally well known, is a metal of considerable hardness; and, although but little malleable, is easily made into plates, by passing it through the rollers of a mill adapted for the purpose; its colour is that of a bluish white; it oxidizes with difficulty, and lately has been much used in this country for various purposes, such as gutters for houses, vessels for containing water, pipes, and other articles; and more recently, also, for the manufacture of door-plates, in preference to brass and other material; it has also been drawn into a wire, for which a patent was obtained by the inventor in one of the towns of the north of England.—*Sheffield Iris.*

ART-UNION OF LONDON EXHIBITION.—The exhibition of the works of art selected by the prizeholders, will be opened to the members and their friends on Monday next, in the Suffolk-street Gallery, with the exception of some few chosen from Westminster Hall, which will not be obtainable till the end of the present month or beginning of the next. The exhibition will also comprise Mr. Selon's picture, "Queen Philippa interceding for the Burgesses of Calais," painted from the cartoon for which the Art-Union awarded their 500*l.* prize. Mr. Lauder's prize picture, "Wisdom;" at Westminster Hall, is amongst the selections.

COMPETITIONS.—Plans, with specifications and estimates, by architects, have been called for by advertisement for the erection of a new borough prison at Plymouth, with premiums of 30*l.* and 20*l.* for second and third plans selected.—Designs are also wanted for a workhouse to accommodate 1,000 paupers of the City of London Union, the architect of the first selected to carry out his own design, and the second and third to receive premiums of 100*l.* and 50*l.*—Plans and estimates also are wanted from architects for the Worcester County Lunatic Asylum, to be built of best hard brick in a simple style; premiums of 50*l.*, 30*l.*, and 20*l.* for the three first selected designs.

TO CORRESPONDENTS.

"*Restoration of Openings in Party Wall*."—Case being still sub judice, papers are not open to us.

"*P. S.*"—The article "Architecture," in "Encyclopædia Metropolitana," was written by MR. J. NARRIEN, A.M. It is not generally sold.

"*Architectural Student*."—Apply to the Director at Somerset House.

"*Z. Y. X.*"—The shadow being thus put in serves to show the actual projection of the parts.

"*Reader from the Beginning*."—In measuring folding gates, the rebate must be added to the width. The parting should have rebated joints, and in this case also, the rebate added. The jamb joint in buildings is always added.

"*Architect's Assistant*."—The number of applications constantly made to men of station by parties quite unknown to them, offers some excuse for non-acknowledgment.

"*J. M. J.*"—Examine it.—Next week.

"*Reader*."—R. W. (Lambeth).—"E. C."—"Observer."—"T. N."—"Young Builder."—"J. R."—"Truth."

Books.—"Architectural Sketches on the Continent," drawn and etched by Thomas Trotter, Architect; London, Masters, Aldersgate-street; Exeter, Wallis.—"Report of the Commissioners on Harbours of Refuge."—"Churches of Warwickshire," No. VIII.; Warwick, Cooke; London, Rivington.—"The Ratio Question," 8vo, Intermediate.

"*Books, Prices, and Addresses*."—We have not time to point out books or find addresses.

Architects.—In the notice of Mr. Rogers's paper on "Limoges Enamels" (p. 367), it was erroneously made to appear that Leonardo da Vinci practised the art of enamelling. It was an artist of the same christian name, who afterwards received the title "Limousin," to distinguish him from the other celebrated Leonardo.

ADVERTISEMENTS.

ROYAL POLYTECHNIC INSTITUTION.

COLLINS'S ODE on the PASSIONS will be recited by Mr. J. RUSSELL, with Illustrations in a Series of DRAWINGS executed by means of the CHALCOGRAPH, commenced by Mr. Farraday, on the Morning of Tuesday, Thursday, and Saturday, and on the Evenings of Tuesday and Thursday, by Dr. Bachhoffner. LECTURES on NATURAL PHILOSOPHY will comprise the Subject of the ELECTRIC TELEGRAPH, &c. &c. A DRAMATICAL LECTURE by C. H. Bellamy, Esq., on the Evenings of Monday, Wednesday, and Friday. The beautiful OPTICAL EFFECTS include the last DISSOLVING VIEWS, DIVISCHRAMA, and DIVER, with EXPERIMENTS, &c. &c.—Admission 1s.; Schools, Half-price.

TO BUILDERS, PAINTERS, AND OTHERS

MESSRS. WOOD and Co., GRAINERS, and WRITERS to the Trade only, 76, York Road, Lambeth; and at 9, Clare Street, Bloomsbury Square.

A. CUNNINGHAM, Grainer, 50, George-street, Hanover-square, respectfully informs Builders, Painters, and the Trade in general, that he will undertake to grain maple wood in a superior manner at 1s. per yard; oak, in the best style, at 1od.; inferior ditto at 8d.; pollard oak, knot, mottle, &c. if required with the same at the same price as oak; all other woods and marbles equally reasonable.

PATENT METALS for Bearings.—Engineers and all Manufacturers in Brass, &c., &c., are respectfully invited to test the quality of these new alloys, which have already received the sanction of eminent engineers and parties connected with public works. They will be found superior in quality and cheaper, than the metals now in use. Other parts will be found of a better colour, a more brilliant surface and bearing a higher polish than any ordinary brass.—Messrs. MEARS will be happy to send any quantity as samples, or to make any castings from patterns sent to them.

PATENT BELLS.—Messrs. MEARS beg to call the attention of the trade and the public generally to these articles, which they are now prepared to supply to any quantity and country. The components are of a new metal called the Cuban Metal, and the bells are of very beautiful tone and cheaper than those made of the ordinary bell-metal.—Orders received at the Bell Foundry, White-hapel, for House, Cattle, Clock, and other Bells.

ECONOMY ECONOMY

STEPHENS' DYES FOR STAINING WOOD, as a SUBSTITUTE for PAINT. For Decorating Churches, Large Public Rooms and Theatres, as well as Private Dwellings.

Where economy in expenditure of material and time is of importance, these Dyes will be found of the greatest advantage, as they give a rich colour to plain woods, while they reflect all the beauty of the natural graining, which is no superior to imitations by art, and, at the same time, avoid the disagreeable smell and deleterious consequences of paint.

The Dyes, or Stains are prepared and sold by HENRY STEPHENS, 34, Manor-street, Blackfriars-road, London, in bottles of 4d. and 1s. each, and at 10s. per gallon. The Oak Colour may be obtained in powder at 6s. per lb., which dissolves in water to form the liquid, and 1lb. will make one gallon of stain.—N.B. The trade supplied.

Sold also at the Office of "The Builder," 2, York-street, Covent-garden, London.

TODD'S PATENT PROTOXIDE PAINT manufactured by CHAS. FRANCIS and SONS, CHRIST WORKS, NINE ELMS, LONDON.

The properties of this Paint are peculiar for preventing iron from oxidation, wood from decay, and masonry from damp; it neither cracks nor blisters with the hottest sun, and is therefore most valuable for Railways, Boilers, Steam, Gas, and Water-pipes; Hothouses, Forcing houses, and for shipping. Its adhesion is so great to iron and wood that the hardest friction will scarcely remove it. It prevents penetration on stuccoed buildings, and is not affected by spray of sea water.

PROTOXIDE PAINT is sold ground in oil, and, compared with white-lead, its property of covering is as 75 to 8; so that one hundred weight is equal to one and a half of lead. It works well under the brush, and forms with oil an unctuous and cohesive mixture. If blended with other paints it has a softer tone than white lead. For houses painted during completion, it is most preferable, being perfectly innocuous.

WALLIS'S PATENT LIQUID WOOD KNOTTING.—This newly-discovered Liquid Composition, which Messrs. Geo. and Thos. Wallis have the satisfaction of introducing to the Trade, possesses the important qualification of perfectly stopping Resin in Wood, however fatal, and preventing them entirely from again disfiguring the paint above.

Many substances have been used as much time spent in endeavouring to find a cure for a bad knot, but hitherto without success. Messrs. Wallis therefore feel much pleasure in offering to the public an article so long and anxiously called for.

In the application, which is not intricate, it is put on to the work with a brush like common paint, can be used in all climates and situations, and does not require heat.

Sold wholesale and retail, by Messrs G. and T. Wallis, Varnish, Japan, and Colour Manufacturers, No. 64, Long Acre.

GREASE! GREASE! GREASE!—JAMES THOMAS PITT begs to inform Railway Contractors, that he is supplying Patent Grease at the following prices:—White Grease, 13s. per cwt. Black Grease 8s. 6d. per cwt. 10 per cent. discount for cash.

Samples sent by addressing to J. T. PITT, Swan Mead, Bermondsey New-road, London.

LADDERS, RAILWAYS, &c.

G. ELL respectfully invites the Attention of Railway Contractors, Builders, Decorators, and the Trade in general, to the extensive assortment of Ladders, Hurdles, Trestle Steps, &c. he has constantly on hand at a very low scale of prices; and a new sliding Extension Hurdle, of such frames and rails as low as 12s. by a quantity being taken; and the best make of stout and framed stairs to be 2s. inch rise by largest size, as low as 18s. for each; ladders complete at 4d. per foot run. Every other description of Hurdle and Ladder equally low.

G. ELL'S MANUFACTORIES, 2, and 6, Tottenham-court New-road, 86, Fetter-lane, opposite Hampstead-road.

ARCHITECTURAL ENRICHMENTS

BIELEFELD'S IMPROVED PAPIER MACHÉ, which has been almost universally adopted for architectural decorations, has been patronized by her Majesty, by the Honourable Commissioners of Board of Works, by the Institute of the nobility and gentry, and for the most eminent architects of the day. It has been used at the royal palaces, at the present Home of Lords, at Dublin Castle, at Ingston Manor, the two Conservative Club Houses, Grocers' Hall, &c. also at the British Museum, and Pantheon Bazaar, where it has been extensively used for some years, and as properties will sufficiently establish its superiority over every other kind of composition, both for beauty and durability. Designs prepared for the decoration of ceilings, panelling of walls, &c. A volume of architectural ornaments, with a large print of Works, 14, Williamson Street North, Pentonville.
